

Sushant Pulipati

Software Engineer

sushnt.dev | sushantpulipati435@gmail.com | github.com/SushantPulipati05 | Pune, India

SUMMARY

Software engineer who builds products end to end, across backend, web and mobile. Built `Redis_Go`, a fault-tolerant, Redis-compatible distributed database in Go, verified against real Redis with 100,000 randomized commands. Two internships in agile engineering teams, and a graphic design background that brings close attention to detail.

EDUCATION

MIT World Peace University (MIT-WPU)
B.Tech in Computer Science and Engineering — **CGPA: 8.16/10**

Pune, India
Aug 2023 – July 2027

TECHNICAL SKILLS

Languages: Go, TypeScript, JavaScript, Python, Kotlin, Swift, SQL

Web & Mobile: React, Next.js, Tailwind CSS, Three.js, Android SDK, Compose Multiplatform, SwiftUI, UIKit

Backend & Data: Node.js, Express, Go (net/http, pgx, sqlc), Ktor, REST APIs, JWT/OAuth, PostgreSQL, MongoDB, Supabase

AI & Cloud: OpenAI API, Google Gemini API, Railway, Docker, GitHub Actions

Practices & Tools: Data structures & algorithms, concurrency, distributed systems, unit & integration testing, CI, Agile/Scrum, Git, Jira, Figma

EXPERIENCE

Infosys

Apr 2026 – May 2026

iOS Software Engineer Intern

Mysuru, Karnataka

- Co-developed **RSMS** (Retail Store Management System), a SwiftUI iOS app for premium brands with separate manager, inventory and sales-associate interfaces, in a 9-member **agile** team.
- Built the backend for the manager interface and helped set up **Supabase** for authentication and real-time data shared across multiple stores and branches.
- Integrated the manager, inventory and sales modules so data flows between roles and locations; the sales side used **Google Gemini** for recommendations and customer management.
- Coordinated the team's **Git** workflow (branching, merges, conflict resolution) and tracked sprint work in **Jira**.

3cortex

Sept 2024 – Jan 2025

UI Engineer Intern

Remote

- Built and maintained the company's corporate website in **React** and **Tailwind CSS**, translating Figma designs into reusable, responsive components.
- Refactored legacy rendering components to improve page load speed.

Freelance

2022 – 2023

Graphic Designer

Mumbai, India

- Designed brand identities and marketing collateral for multiple clients, working directly with them to turn requirements into finished designs.

PROJECTS

Redis_Go: Distributed Redis-Compatible Database | Go

github.com/SushantPulipati05/Redis_Go

- Built an in-memory database in **Go** from scratch that works with the official **redis-cli**, **redis-benchmark** and client libraries: RESP parser, concurrent clients, lazy and active key expiry, and append-only-file persistence with crash recovery.
- Implemented leader-follower **replication** with partial resync, and **automatic failover** through Raft-inspired majority elections, split-brain write protection and a **WAIT** command for synchronous replication.
- Verified against real Redis with **100,000 randomized commands** (identical replies) and 48 race-detector tests in CI; profiled pipelined throughput and batched reply writes for a **2.9×** gain (660k GET/s).

Brainly | Next.js, TypeScript, Node.js, OpenAI API

- Built an **AI-powered** note-taking app that organises notes and uploaded files of multiple formats in one workspace.
- Integrated the **OpenAI API** for automatic summaries, content extraction and contextual search across a user's documents.

TrainLog | Kotlin, Jetpack Compose, Ktor, PostgreSQL, Railway

github.com/SushantPulipati05/TrainLog

- Built a full-stack workout tracker: a native **Android** app backed by a **Ktor** REST API and a relational **PostgreSQL** schema, now in beta testing with real users.
- Deployed the API and database to the cloud on **Railway**, serving the Android client over a live API.

Journaling App | Go, PostgreSQL, Kotlin, Compose Multiplatform

In Progress

- Building an offline-first Android and desktop app synced through a stateless **Go** REST API, with a push/pull sync protocol, conflict resolution and Google Sign-In with JWTs.

Diabetes Management App | Swift, UIKit

- Built an iOS app helping people with diabetes track blood glucose, meals, activity and symptoms, with custom charts of long-term trends.
